SCBIM

SCBIMV (Flat Spray)

- Pneumatic spray nozzle producing fine atomization with a mean droplet diameter of 100 µm or less.*¹
- Flat spray pattern.
- Features large turn-down ratio under liquid pressures of 0.1–0.3 MPa.
- The spray distribution varies depending on the air-water ratio.
At a low air-water ratio, the distribution takes a mountain shape, and it shifts to even, as the air-water ratio increases.

*1) Droplet diameter measured by laser Doppler method

How to Use Spray ON/OFF Control Adaptors

■SNB Adaptor (CSN, SN Adaptors)

The spray is turned ON/OFF by turning the compressed air ON/OFF.

Use with compressed air pressure of 0.2 MPa or higher.
Adaptor types **CSN** (see page 31) and **SN** (page 40) are used in the same way.

Liquid	Stop	Spray	Stop	Spray	Stop

Piping example

■SPB Adaptor (CSP, SP Adaptors)

This type has a built-in shutoff piston that operates on pilot air pressure. The spray is turned ON/OFF by turning the pilot air ON/OFF. Use with pilot air pressure of 0.2 MPa or higher.

As even low pressure atomizing air can be used, production of a range of fine to coarse fog is possible. Best-suited for when there is concern about scattering droplets.

Adaptor types **CSP** (see page 31) and **SP** (page 40) are used in the same way.
